01 PROFILE

Technology founder and IT project manager, with more than 10 years across 7 sectors: technology, government, retail, hospitality, sport, finance and business, and culture. The path begins with a diploma in computer science and network management from the College of Communications and Electronics in Jeddah, deepens at the Ministry of Interior (2019–2023), then the founding of Smart Applications for Commerce in 2021. Currently leads IT project delivery at Ilham Programming by an analysis and engineering method backed by an intelligent-agent layer. Certified, documented freelance practitioner with the Ministry of Human Resources and Social Development.

LEADERSHIP AND FOUNDING · 10+

Founding entities, designing business models, building partnerships, and enabling early teams.

FULL-STACK · 7

Next.js, React.js, TypeScript, Node.js, Python, PostgreSQL, Supabase, iOS, Android, and server administration.

INFRASTRUCTURE AND SECURITY · 2021

Networks, continuous delivery, encryption of intake data, and governance of access rights.

PROJECT GOVERNANCE · MHRSD

Agile management, stakeholder alignment, and scope and budget held so delivery meets the date.

Method and intelligent agents

Projects are analyzed and architected through a dual methodology: private AI agents programmed on each task's documents and requirements, together with advanced use of public models (such as Gemini, Grok, and others) for deep research, comparison of solutions, and review of the technical output. This secures speed of delivery and accuracy of the decision.

02 EXPERIENCE

Since 2021 the roles run in parallel: leading the entities, IT delivery at Ilham Programming, and independent advisory, continuing the executive coordination that began in 2018.

2025 – Present

CURRENT

IT Project Manager

Ilham Programming for Information Technology · Saudi Arabia

- Lead IT programmes from requirements engineering through final acceptance, aligning engineering teams with stakeholders in the public and private sectors.
 - Apply agile governance to hold scope, the sequence of deliverables, quality reviews, and the architectural audit of releases.
- Impact and result.** Government and enterprise projects delivered on schedule and budget, with rework cut by more than 25%. The company's portal loads in under 0.8 seconds, and organic reach is up 240%.

2021 – Present

Founder and Executive Director

Smart Applications for Commerce and related ventures · Saudi Arabia

- Founded Smart Applications for Commerce in 2021 and launched more than three digital and commercial entities that are still operating.
- Set the product roadmap, the business models, built the teams, and managed partner relationships across the portfolio.

Impact and result. Entities with sustainable operating models, aligned with the digital economy of Vision 2030. More than 20 early teams supported; 75% of them reached funding or operating growth.

2021 – 2023

Team Lead and Solutions Engineer

Smart Applications for Commerce · Saudi Arabia

- Engineered high-availability commerce platforms and applications: APIs, cloud infrastructure, payment gateways, and continuous delivery.
- Led the full engineering cycle: code review, release lines, and the move of systems from build into operation.

Impact and result. System response time cut by about 40%, and the platforms raised to accommodate more than 50,000 users.

2019 – 2023

Operations and Administration Specialist

Government sector · Ministry of Interior · Saudi Arabia

- Administrative and operational duties requiring accuracy, confidentiality, and coordination across units.
- Planning and problem-solving under pressure. Those standards were later carried into the governance of technical programmes.

Impact and result. Operational discipline and high-level administrative coordination inside a highly sensitive government environment.

2018 – 2024

Executive Coordinator and Secretary

Public and private organisations · Saudi Arabia · alongside later roles

- Ran executive correspondence, schedules, briefings, and logistics, as the link between leadership and delivery teams.
- Turned leadership decisions into documented minutes, schedules, and clear tasks for the teams.

Impact and result. Coordination of more than 500 high-level operating and administrative cycles across sectors.

2021 – Present

Independent Solutions Engineer

Mazen 96 Studio · Saudi Arabia · freelance register, Ministry of Human Resources

- Architectural advisory and bespoke platforms for companies and early teams, in parallel with the existing entities.
- Coverage includes commerce, logistics and delivery, archiving, and private institutional portals.

Impact and result. Audit of existing systems and removal of their bottlenecks, with operating performance improved by up to 300% in measured cases.

03 PLATFORMS BY FIELD

Education and training platforms

Two specialist learning systems. The academic path links finance and economics students to cooperative training through skill matching, a digital professional file, and live data boards for the university, the company, and the student, cutting candidate-screening effort by more than 60%. The memorisation path runs separate circles for boys and girls, with permissions for the teacher, the supervisor, and the learner: enrolment, recitation follow-up, and remote circles, with an education release in preparation. The operator sees trainees, teachers, and open seats in real time, without exporting separate sheets.

Result. Registration, training, and assessment are joined on one digital path that replaces scattered files.

Investment and company-formation platforms

A digital portal that takes the investor from a general enquiry through company formation to seizing the investment opportunity inside the Kingdom. The Arabic, responsive interface explains the services, the formation steps, and the opportunity in full, so the international partner follows the offer alone without the explanation being repeated at every stage.

Result. Formation and investment become one transparent, automated path, in place of scattered paper transactions.

Recruitment and hiring platforms

A licensed recruitment system: 7 operating portals, 5 introduction paths, and a 12-stage cycle aligned with Musaned — matching, contract, payment, medical check, visa, arrival, and the 90-day guarantee — on one surface, with mobile apps on the same API. Beside it, an artificial-intelligence curriculum-vitae system for the Saudi labour market is in preparation, with structures applicant-tracking systems can read. Recruitment offices, clinics, and operations managers work from one central copy of the order.

Result. Hiring and recruitment collapse into one linked cycle, from selection through to the guarantee.

Digital-identity platforms

A digital identity-management system for individuals and organisations: two dedicated paths, 11 languages, and full support for Arabic direction. Each category, person or organisation, has its own form. The intake layer is protected by AES-256-GCM encryption, blocking of automated submission, and encrypted receipts held apart from the front end, so multi-step forms stay on the secured path.

Result. The client holds a lasting digital asset and presence, not a profile page that expires with the project.

04 PLATFORMS BY FIELD, CONTINUED

Hospitality and lifestyle platforms

A digital lifestyle desk in Riyadh for executives who want decisions managed, not a calendar merely displayed. It coordinates the week's appointments, travel bookings, and events inside a quiet private interface, reviews priorities in advance, and moves the service before it is asked, on one private record.

Result. The client's time stays on the strategic work, and the logistics of coordination are carried for him.

Culture and visual-archive platforms

A bilingual visual archive that tells the story of the photographer's work rather than lining files up. Two modes: a gallery wall and a cinema room. Arabic leads and English follows on the same works, with a film strip, a display grid, and a lightbox, so the visitor moves without losing the frame's context.

Result. The platform is presented as an art-exhibition experience, not a conventional photo album.

Engineering and operations platforms

A portal for engineering and construction, operations and preventive maintenance, and infrastructure networks, under Saudi technical supervision. The request, the execution follow-up, and the asset's history share one path, so a later fault is diagnosed against the plan the project was actually built on.

Result. Operations and maintenance stay transparent to management, without data lost in scattered sheets.

Commerce, delivery, and records platforms

In e-commerce: linking Mada and Stripe and live inventory management — conversion up 35%, inventory efficiency up 40%. In restaurant delivery: live tracking maps and a direct point-of-sale link — delivery time down 25%, partner sales up 30%. In archiving: encryption, audit logs, and permission governance — document retrieval time cut by 80%. Custom interfaces raised engagement 45%. A corporate technology portal loading in under 0.8 seconds raised organic reach 240%. More than 20 early teams were supported; 75% of them reached funding or growth.

Result. Each operation is documented by its impact figure: conversion, time, retrieval speed, or reach.

+60%

Less effort screening education candidates

-80%

Shorter record-retrieval time

+35%

E-commerce conversion growth

+45%

More engagement on custom interfaces

+40%

Higher inventory-management efficiency

+240%

Higher organic reach for the portal

-25%

Shorter order-delivery time

50k+

Active users on the systems

05 EDUCATION

Diploma in Computer Science and Network Systems Management

College of Communications and Electronics, Jeddah

Technical and Vocational Training Corporation (TVTC) · Saudi Arabia

The foundation covered systems architecture, routing and switching, network security, operating systems, relational databases, and systems analysis and design. That is the base on which network administration was later built, then platform development, then delivery governance.

LANGUAGES

- **Arabic** — Native. Professional drafting, negotiation, and formal correspondence.
- **English** — Full professional proficiency in technical and commercial settings.
- **Chinese** — Foundational familiarity, including basic technical terms.

CREDENTIALS

- **Freelance document.** A certified practitioner registered with the Ministry of Human Resources and Social Development and the Social Development Bank, in information technology and digital services.
- **Commercial registers.** Founder and owner of entities licensed by the Ministry of Commerce, foremost Smart Applications for Commerce.

INTERESTS

- **Chess:** several moves ahead, and a decision under pressure.
- **Shooting:** focus, timing, and self-command.
- **Photography:** composition engineering, lighting, and the story of the frame.
- **Taste:** specialty coffee, literature, music, and world cultures.

09 SECTORS

Technology. Web and mobile platforms, APIs, and network administration.

Retail. E-commerce systems, inventory, payment gateways, and customer accounts.

Sport. Partnerships and technical applications within the documented work.

Culture and non-profit. Visual archives, memorisation platforms, and non-profit-sector solutions.

Technology

Government

Retail

Hospitality

Sport

Finance and investment

Culture and non-profit

Government. Administrative and operational work at the Ministry of Interior, and coordination across units.

Hospitality. Appointment management, travel bookings, and private events.

Finance and investment. Finance-training platforms, company formation, and opportunity portals.

What the employer receives. A leader who runs the technical project and builds parts of the system by hand, working by a modern method that uses private AI agents and public models (Gemini, Grok, and others) to speed analysis and raise the quality of the output before it is approved. Experience that brings together the founding of entities, the discipline of work at the Ministry of Interior, and actual delivery of platforms in education, investment, recruitment, identity, hospitality, culture, engineering, and commerce.

Primary language of communication **Arabic**

06 TECHNICAL ARSENAL

FULL-STACK

Next.js, React.js, TypeScript, Node.js, Python, PostgreSQL, Supabase

The build path for front-end interfaces, APIs, and databases.

IOS AND ANDROID

Mobile apps extend the central platform. They are not a product set apart from it.

SERVERS AND INFRASTRUCTURE

Running servers, automating release, and monitoring, from the academic network foundation to the release lines.

WORK GOVERNANCE

Stakeholder coordination, technical writing, and team management through Agile, Scrum, Kanban, and Git.

07 WORKING METHOD

- **Agents first.** A dedicated agent on the task files, then a public model such as Gemini or Grok for research and review, before any analysis or architectural founding is approved.
- **Constraint & architecture audit.** Audit the existing structure and gather the requirements before choosing the tool.
- **Engineering for the business.** The architecture is tied to the commercial and investment aim, not to a technical preference.
- **Scope control.** Short cycles, with continuous review and governance of scope.
- **Security and standards review.** Security and performance are tested before the system is considered ready for delivery.
- **Sustainable handover.** The project is delivered with a growth path, not a launch followed by a stop.
